Summary

Full Stack Developer with 2 years of experience building scalable web applications using the MERN stack (MongoDB, Express, React, Node.js). Skilled in delivering end-to-end solutions, optimizing performance, and automating workflows to improve efficiency. Proven ability to collaborate across teams, mentor juniors, and solve technical challenges under tight deadlines.

Skills

Frontend: HTML5, CSS3, SCSS, JavaScript, React.js, Redux, Next.js, Three.js, GSAP, Tailwind CSS | **Backend:** Node.js, Express.js, Prisma, OAuth, Cron Jobs | **Databases:** MongoDB, Redis, PostgreSQL | **Payments:** Razorpay, PhonePe | **AI/ML:** Langchain.js, LangGraph.js, ReAct Agents | **Google APIs:** Google Meet, Calendar, OAuth | **DevOps:** AWS (Lambda, EC2, S3, SES), Vercel, Render, Docker, Git, VPS (Hostinger) | **Automation:** Pabbly Connect, Zapier, n8n | **Tools:** VS Code, Cursor Ai, Postman, ngrok, WordPress, Cloudinary

Experience

Full Stack Developer (MERN), 9x Technology LLC – Onsite July 2025 – Present

- Architected and led the development of a multimodal AI platform that concurrently queries multiple LLMs—including ChatGPT, Gemini, DeepSeek, Grok, and others—to generate and compare responses. Implemented Redis for in-memory caching of frequent queries and Redis Queue for efficient, asynchronous job processing, significantly reducing latency
- Engineered advanced capabilities such as AI-powered image generation (via integrations with DALL·E and other vision models), "humanize" text post-processing to enhance naturalness, and dynamic response scoring/ranking based on relevance and coherence
- Spearheaded the full-stack system architecture using the MERN stack, with MongoDB used for structured storage of user sessions, prompts, responses, and metadata. Designed scalable microservices to handle model orchestration, rate limiting, and fallback mechanisms to ensure reliability under load

Full Stack Developer (MERN), Huemn Interactive Pvt Ltd – Onsite June 2024 – April 2025

- Designed and deployed serverless GraphQL APIs using a microservices architecture (Auth, Workflow, Analytics, Calendar, Ai), reducing over-fetching by 40% and improving query performance by 35%. Implemented multi-region deployment (ap-south, us-east) for each service, cutting infrastructure costs by 60% compared to traditional EC2-based APIs
- Built a no-code drag-and-drop website builder using React.js, Node.js, and MongoDB with AI-powered content generation (OpenAI). Reduced site creation time by 60%, increasing user adoption by 45% and cutting manual content effort by 75%
- Developed a high-performance gallery module with facial recognition and bulk uploads (10,000+ images). Implemented queuing & retry logic, improving upload success rate to 99.8% and reducing processing time by 50%
- Generated full-stack architecture of Link-in-Bio platform and real-time chatbot using MERN stack & WebSockets. Improved engagement by 25% and reduced latency by 70%. Mentored 3 junior devs and Optimized synchronization scripts between builder services and client service repositories, reducing deployment times by 95% and eliminating manual sync errors

Junior Software Developer (MERN), TechTok4u Pvt Ltd – Remote December 2023 – June 2024

- Presented and developed role-specific dashboards (admin / teacher / assistant / parent) for 10+ schools using React.js + ApexCharts, allowing real-time tracking of attendance, grades and fees. Reduced manual report generation time by 70% and improved data accuracy by eliminating Excel-based processes
- Built 60+ REST APIs (Node.js/Express) with optimized MongoDB queries, reducing latency by 30% for high-traffic endpoints like exam result processing. Implemented QR-based navigation (React.js).

API Integration Developer Intern, Groomer Ltd – Remote Sept 2023 – Nov 2023

- Developed 15+ REST APIs (Node.js/Express) for salon management system, transitioning 10+ salons to digital operations and reducing booking errors by 30% through process automation. Maintained end-to-end API development with MongoDB optimization, improving query performance by 40% for high-traffic endpoints like availability checks. Integrated PhonePe payment gateway, increasing successful digital bookings by 30% while implementing JWT authentication

Projects

Mosque Management System | MERN-Next mosque-management-dev.vercel.app

- Building a full-stack mosque management platform using MERN stack and Next.js, featuring dual portals (admin dashboard for prayer schedules/events/announcements and a public portal for community engagement). Implemented JWT authentication and role-based access control.
- Repository: github.com/mohammedshahid096/mosque_management

- Designed and developed a full-stack tuition management platform using the MERN stack, offering features like course management, chapter tracking, project submissions, and automated Google Meet link generation for virtual classes. Implemented JWT-based authentication and role-based access control.
- Repository: github.com/mohammedshahid096/tutuion_management

CSIT Solutions | Freelance | Frontend

animal-project-psi.vercel.app

- Developed a responsive frontend portal for animal Healthcare Management using React, featuring interactive modules for animal profiles, treatment history, veterinary records, ancestry lineage visualization (chronology graph), weight tracking charts, and digital prescription management.
- Enhanced frontend performance using Redux and React Context to centralize state management, implementing smart data fetching logic that avoids redundant API calls by reusing cached data when available. Integrated client-side export functionality to generate PDFs and Excel files for large datasets (1,000+ data points), and implemented efficient pagination with virtualized rendering to ensure smooth UX during data navigation.

Education**Jaya Prakash Narayana College of Engineering**, B.Tech in Computer Science Engineering

April 2019 – June 2023

- GPA: 7.2/10
